Mutual fund investing involves risk. Principal loss is possible. The Fund normally invests its assets in the common stocks of approximately 15 to 25 mid- and large-cap companies with a sustainable competitive advantage. In addition, the Fund may from time to time purchase a common stock that does not meet this criteria if, in the investment advisor's opinion, the stock represents a particularly attractive investment opportunity. While most assets will be invested in U.S. common stocks, other securities may also be purchased in keeping with the Fund's investment objectives. The Fund is non-diversified, which means that a significant portion of the Fund's assets may be invested in the securities of a single or small number of companies and/or in a more limited number of sectors than a diversified mutual fund. The Fund is subject to greater risk and could fluctuate in value more than other mutual funds diversified across a greater number of securities and industries. The Sub-Adviser's use of its ESG framework could cause it to perform differently compared to funds that do not have such a policy. The criteria related to this ESG framework may result in the Fund forgoing opportunities to buy certain securities when it might otherwise be advantageous to do so, or selling securities for ESG reasons when it might be otherwise disadvantageous for it to do so.

Active Share measures the percentage of stock holdings in a fund that differ from a benchmark. Alpha is the excess return of an investment relative to the return of a benchmark index.

The S&P 500 Index is a capitalization-weighted index of 500 stocks. An investment cannot be made directly into an index.
